

The **SILENT** Revolution
with Synchronized Motor Technology (SMT)

Voyager 1
265-607gph

Voyager 2
800gph

Voyager 3
1200gph

Voyager 4
1600gph

**Voyager
Pumps**

Voyager HP 2800gph
Voyager HP 3200gph
Voyager HP 3600gph
Voyager HP 4000gph

Unique flow adjustment for an ideal current for all coral and aquarium needs
Flow can be regulated and current stream can be widened

- Quietest model on the market
- Longest lasting
- More features
- Timer safe
- Fish safe
- 3-year Warranty
- Most reliable
- Most powerful magnet
- Widest range of direction
- Lowest electrical consumption
- Rotation allows mounting on back glass
- Flow adjustable and directional
- Can be alternated off and on rapidly without noise

Voyager . . . motion of energy . . . the range continues . . .

The Voyager is the ultimate stream pump for marine aquariums, reef aquariums, and fresh water aquariums. The New Voyager HP or, High Performance, series builds upon all of the same great features and technology of the Voyager 1 through 4 but takes them to another level. The models range from 2800gph to 4000gph with innovations that leave them in a class by themselves. Thanks to the exclusive magnetic support, the Voyagers can be positioned anywhere: on the sides, behind the tank, and around the aquarium's corners. The support system permits them to reach up to 180 degrees vertically and 360 degrees circulatory has endless orientation possibilities. This unique feature allows the units to be mounted on the rear glass of the aquarium without sacrificing its directional range. The Voyager's versatility in movement and positioning makes it possible to hide them anywhere, assuring optimal performance. The removable front ring insert allows you to regulate the water flow wide or narrow, satisfying even the most particular species needs. The units have the most durable rotor, ceramic seats, and a ceramic shaft. This, combined with the electronic engineering of the motor, assures that the pump always starts in the correct direction without vibration or noise. The rotor and shaft of the Voyager are wear-resistant beyond compare! Mounting does not rely on suction cups or a combination of suction with magnets because in a salt water tank or in hard water they become stiff with time, compromising their hold, and causing the pump to become unstable. The exclusive magnetic support for the Voyager is long-lasting, reliable, ideal for glass up to .787 inch thick and prevents slippage, vibration, and wear on the glass.

Voyager HP 2800gph
 Voyager HP 3200gph
 Voyager HP 3600gph
 Voyager HP 4000gph

Features:

- ETL and cETL listed
- 3 year warranty
- 360 degree pump rotation
- Support w/ magnets
- Adjustable angle deflector
- Quiet operation
- Safe for use with timers
- Can be turned on and off quickly without harm or noise
- Latest in prop rotor technology
- Microfine direction adjustment with locking fasteners
